

# SEACRUISE CRUISER

A cruise experience with a touch of class.

Our custom designs are the key to a better cruise.

The design concept for our 4 cruisers is the same as the limited express “A-Train”.

The four beautiful cruisers “VistaBonita”, “Marisol”, “Serena” and the “Olivia” were designed by the renowned industrial designer, Mr. Eiji Mitooka. The classy designs of our ships are conceptually the same as the Limited express “A-Train” which runs between Kumamoto Station and Misumi Station. Like the “A-Train”, the materials used in our ships are of the highest quality. The seats are made up of moquette which is the same as those used in the express trains for JR Kyushu. The flooring has been designed with a wood based finish.

Signs are specifically designed for the interior of our ships which add to the overall quality of your experience. All ships have been fitted with air-conditioning and toilets for a more comfortable experience for all age groups.

The Kumamon cruiser has been designed based on the popular local character “Kumamon”.

As you may already know, “Kumamon” is the most popular local character in the whole of Japan. We have created a custom ship design based on this beloved character. We have gone one step further than just designing the exterior. The interior fittings have also been designed with the “Kumamon” color and motifs, creating a memorable trip for not only the children but also adults. With a 12 person capacity, it is an ideal ship to charter for special occasions with family and friends.
